Introduction

There are over 100,000 people in the United States living with sickle cell disease (SCD). Access to high quality healthcare and services with providers knowledgeable about SCD care is imperative. The Sickle Cell Disease Treatment Demonstration Program (SCDTDP), is mandated by Congress and funded through the U.S. Health Services Resources Administration (HRSA). More information about the program can be found [here](#). The materials listed in this compendium offer a range of tools, materials and resources for providers and care teams in support of the strategies and activities they are using with patients and families to ensure the best quality of life for those with living with SCD. This Compendium of Tools and Materials for SCD resources is the companion piece to the [Sickle Cell Disease Treatment Demonstration Program 2017 Model Protocol](#), which details key strategies for improving patient access to high quality care and disease modifying treatments by knowledgeable providers.

Provider Education & Capacity Building Resources

All the materials in this compendium are useful tools to providers treating SCD. Some are for sharing with patients to support awareness, self-care management and shared decision making. Others are protocols and best practices that primary care, emergent care, and specialists need to know and use to serve individuals with SCD. During the SCDDTP 2014-2017 project, there were resources and methods for spreading knowledge of and awareness for SCD.

Screening and Trait Resources

Though carriers of the sickle cell trait do not have the same symptoms as those with sickle cell disease, it is important for individuals to know their status and how it can impact them and their families.

Individuals often become aware of their status through community health fairs or during pregnancy, when screening for sickle cell disease and general education are offered. This group of resources can be used by providers to educate patients about sickle cell disease, sickle cell trait and screening.

Medical Home/Care Coordination Resources

People living with sickle cell disease often have multiple and complex medical needs, so it is ideal to be able to coordinate care among various specialties. This group of resources is useful for patients, providers and representatives of community-based organizations who are involved in coordinating care for patients.

Individual Care Plans

- [Patient Needs Assessment](#) (created by the IL TDP team)
- [SMART Phrase](#): Quick summary of relevant sickle cell disease management facts (created by the OH TDP)
- [Patient Needs Assessment Form](#) (created by the IL TDP)

Health Maintenance Tracking Tools

- [Care Coordination Screening](#) (created by the IL TDP team)
- [Care Coordination Checklist](#) (created by the IL TDP team)
- [Well Sickle Checklist](#) (created by the NY NBSP)
- [Patient Event Diary](#) (created by the NY NBSP)
- [Sickle Cell Disease Clinic Worksheet](#) (created by the IL TDP)
- [Adult Patient Tracking Log](#) (created by the IL TDP)
- [Health Maintenance Form](#) (created by the NJ TDP)

Mental Health Screening

- [Depression Checklist](#) (created by the TN NBSP)
- [Mental Health Referral Protocol](#) (created by the MO TDP)
- [Patient Referral Satisfaction Survey - Mental Health Services](#) (created by the MO TDP)
- [Mental Health Referral Flowchart](#) (created by the MO TDP)
- [Patient Health Questionnaire - Depression Screening](#) (created by NJ TDP)

Linkages with Educational Systems

Hydroxyurea Resources

The drug hydroxyurea has been life-changing for those who are able to use it (it is not effective for all types of sickle cell disease), yet many people who are eligible are not using hydroxyurea. This group of resources have been used by providers to share information with patients about the benefits and risks of using hydroxyurea. Please reference the [Evidence Based Management of Sickle Cell Disease: Expert Panel Report, 2014](#) (NHLBI, NHI) for updates in evidence-based treatment recommendations

Patient Education

Local Electronic Health Registries

Developing a local, electronic health registry to track sickle cell disease specific measures was a key component for SCDTDP RCCs to measure and improve the quality of care for patients with SCD and to track progress over time.
